

Abstract

The present invention relates to reactive compositions which at least one compound **A** having at least two reactive groups which are selected from the group comprising isocyanate, epoxide, alkoxy silane, and mixtures thereof
5 and also at least one polymeric thixotropic agent **B** prepared by homopolymerizing a (meth)acrylate **B1** or by copolymerizing a (meth)acrylate **B1** with at least one further (meth)acrylate, the (meth)acrylate mixture possessing an average (meth)acrylate functionality \bar{f} of 2.5 to 4.5. The (meth)acrylate **B1** here contains three or more (meth)acrylate groups.
10 The invention additionally discloses the use of the compound **B** as a thixotropic agent.
